

Rowan Kinross Bristol, UK

Code: Python, R, C++ (Arduino), JavaScript (Node.js, React).
Data: Jupyter, SQL, Time-Series Forecasting, Data Modelling.
Design & Spatial: QGIS, Rhino 3D, AutoCAD, Adobe Suite.

Portfolio: rowankinross.com | **LinkedIn:** linkedin.com/in/rowan-kinross | **Github:** github.com/RowanKinross

Versatile **Architecture BSc Graduate** and **Software Developer** with 2 years experience building data-driven tools. Leveraging a background in **precision-modelling** and **applied mathematics** to solve complex environmental challenges through data science. Developed a bespoke tracking application for a high-volume frozen pizza enterprise, utilising **statistical trend analysis** and **time-series forecasting** to optimise inventory and supply chain operations. A quick learner, proficient in full-stack development (React, Node.js, Firebase) and mathematics, intrinsically motivated by a love for the natural environment, to use logic and sustainable innovation to support communities and our planet.

Education

IBM | Certificate: Introduction to Data Science, Dec 2025 - Jan 2026

- Developed proficiency in data retrieval, manipulation, and visualisation using SQL, R, and Python; utilised Jupyter Notebooks to document reproducible analytical workflows.

UK Government Skills for Life | Bootcamp: Web Development, Nov 2023 - Mar 2024

- Completed an intensive **400+ hour programme** facilitated by the University of Birmingham and edX, learning JavaScript, HTML, and full-stack application development, resulting in a professional web development internship.
- Demonstrated technical leadership through pair programming; consistently sought out by peers to collaborate on final-phase projects due to high-quality code contributions.

Strathclyde University | BSc: Architectural Studies with International Study with Merit

- Selected Strathclyde for its technology-focussed approach, involving rigorous structural load-bearing calculations and geometric optimisation to improve thermal performance and reduce material costs.
- Developed feasibility studies and quantitative costing, re-engineering designs based on performance metrics.
- Completed an elective **Advanced Calculus** module out of personal interest, achieving a final grade of **94%**.
- Conducted spatial morphology research at Chalmers University, Gothenburg; utilising **QGIS network analysis** on shortest-route data and **accessibility modelling** to propose evidence-based urban re-integration strategies.

Trinity Academy, Edinburgh

- Dux of the School: Awarded for highest academic standing in the graduating year.
- SQA Advanced Highers in Maths, Art and Chemistry with grades **AAB**.
- SQA Highers in English, Chemistry, Art, Maths and Physics with grades **AAABB**.
- SQA National 5 in English, Maths, Physics, Chemistry, French, History, Music and Art with grades **AAAAAAA**.

Employment History

Full-Stack Software Developer | Bertha's at Home, MAY 2024 - Present

- Designed and deployed an open-source bespoke operational web-app from scratch, creating a core data-driven system. The app, used daily, manages inventory, production, and supply chain logistics for a successful frozen pizza business.
- Built a multi-functional back-end using Firestore to manage complex data retrieval, user hierarchies, and real-time synchronisation to ensure data integrity across eight modules including batch traceability and demand summaries.
- Developed a demand-forecasting engine using **four-week rolling averages** and a **12% tracked wastage coefficient**, to predict production and material requirements.

Software Engineer | APIDNA, MAY 2024 - AUGUST 2024

- Engineered a data-validation tool to evaluate Large Language Model (LLM) outputs, focusing on data transformation, query handling, and the visualisation of model accuracy metrics.
- Developed logic to reconcile disparate data endpoints (JSON and .xlsx), ensuring the accuracy and integrity of autonomous API integrations through automated consistency checking.
- Led UX/UI enhancements using Google Console and Visily to optimise functionality and brand alignment.
- Collaborated within a six-person Agile team to implement object-oriented principles and version control, managing the end-to-end pipeline from local data processing to live deployment.

Head Chef | Bertha's Pizza & Bertha's at Home, FEBRUARY 2024 - Present

- Managed multi-site operations - responsible for production of 500+ units daily and for a team of nine chefs.
- Optimised labour allocation by performing a **statistical analysis of prep-time data** to calculate unit labor costs and forecast staffing requirements - an independent initiative to drive operational efficiency.
- Engineered custom dough-modelling programmes to synchronise production planning with inventory constraints, developing a **recursive model** to calculate mix volume and starter based on a three-day lead-time.
- Iterative recipe testing using **Baker's Percentages** and workflow refinement for scalability and consistency.
- Implemented waste reduction frameworks by analysing food waste volumes, using spreadsheets to inform precision planning and reduce environmental impact.
- Collaborated with suppliers to reduce single-use packaging and fostered a community-engaged work environment within a high-output, family-run business.

Personal Projects

Applause-Meter: Engineered custom hardware and software to map analogue sound signals (applause) into discrete numerical outputs, to switch on lightbulbs. Used digital signal processing, defined thresholds of the sensor input and C++ (Arduino) constraint logic to filter target signals from background environmental noise and outliers.

AnswerSphere: Integrated OpenAI API with a custom UI to generate structured responses. Developed a secure back-end for persistent data storage, enabling user authentication and historical data retrieval.
